

Backing Up Addendum: Since I wrote this article, I ran into a problem with my Drobo. I upgraded my Mac Operating System to High Sierra and my Drobo no longer worked. I called Drobo Technical Support only to find that my Drobo was out of warranty and if the cookbook fix didn't solve my problem, I would have to pay to get my Drobo working. I also discovered a big negative with Drobo – the hard drives cannot be read by any system other than Drobo's. In other words if I didn't repair my Drobo all of my 'data' would be useless. The worst part of this snafu is that its December and my annual backing up to another source takes place in January!
